

iTGRC Asia Practitioners Advisory Group

June 2017 Announcement

I-TRUST Denmark and iTGRC Asia sealed our partnership in May 2017, promoting a collaboration platform to meet the impending GDPR mandates for all organizations, including those in Asia Pacific.

STRONG ALLIANCE OF DATA PROTECTION MARKET LEADERS, I-TRUST DENMARK AND iTGRC ASIA SEALED PARTNERSHIP IN MAY 2017, DELIVERING ENABLOR IN ASIA PACIFIC

Do you have a “PASS” to GDPR? Now company and organization can approach iTGRC Asia to protect your business and avoid tough penalties up to 4% of annual turnover or €20 million, whichever is greater. I-TRUST, a Denmark based Consulting firm has appointed iTGRC Asia Practitioners Advisory Group as its strategic partner, a Representative in Asia Pacific to land their strategic solution that fully enable Data Protection and GDPR Regulatory Compliance for all organizations in Asia.

Words from I-TRUST Chief Executive Officer, Klaus Kristensen

The EU data protection regulation requires management attention, effective business processes as well as IT and IT-security controls. In the Nordic countries **enablör** has proved its value in establishing alignment between those areas as a prime condition.

The idea behind **enablör** is to use metrics on standards and regulations for establishing best practice processes and supporting governance structures. Using benchmark metrics supports effective implementation and operation.

Transparency is vital in a world with trusted relations and is one of the main ideas behind **enablör**.

We are happy to introduce **enablör** in Asia with iTGRC as a strategic partner.

Frank Chin, iTGRC Asia Chief Practitioners Advisor, said

With the impending General Data Protection mandates announced by EC in 2016, our partnership with I-TRUST brings to the business and communities here in Asia Pacific a strategic platform to empower and enable the fulfillment of the compliance requirements, and continue to stay abreast and vigilant to the changing landscape of information risk and security, readily respond appropriately to the requirements and changes. Today, there lacks a robust, friendly solution that can capture key processes and controls, connect them to the policies or regulatory requirements, and integrate them into centralized, secured and yet collaborative platform that comfortably and

responsively enable business as usual and yet remains resilient.... Our partnership here will make it possible now for all business across sectors. As seasoned industry practitioner, we promise to deliver on our commitment to our clients and their needs by conferring strengths and resilience through greater risk and security assurance.

Best in breed, builds resilience in the thriving ERA

ENABLOR

Cloud based IT-solution for gap analyses, risk assessments, process change and security management. **enablör** supports organisations' work with implementation of the **EU GDPR, ISO and PCI standards**. It is a management and compliance portal developed to give organisations the option and opportunity to manage information security by measuring the status of compliance with legislations, getting access to tools for analysing, improving information security management as well as sharing knowledge with and benchmarking against similar organisations. It's a cloud based center repository that makes working with EU GDPR, or General **Data Protection** requirements and **Information Security** effective & easy way without duplication of process and data through its feature for Governance, Prioritization of organization efforts. It's workflow and process model identify gaps in relations to legal requirements and standards, connect them with prioritizing actions, document the information security level in a Statement of Applicability (SoA) for auditors, shareholders and board directors. **enablör's** dataflow and resource registration feature relates to privacy, a new requirement introduced by the EU GDPR by offering an overview of all possible placements of documents and data, creating a map of places where potential security breaches can happen. Last but not the least, **enablör** caters for Multiple Organisation Structures through group structure setup for subsidiaries, and underlying institutions, chat, task delegation, collaboration with library sharing guidelines, policies and it also enable external **DPO, Data Protection Officers**.
